SUMMARY

Backend developer with 10 merged pull requests to a production Ruby on Rails API powering a live B2B salon analytics and booking platform. Ships feature modules, schema migrations and RSpec request specs through senior code review, and fixes production defects on critical booking paths. Comfortable across the stack, with full-stack applications built in React, Node.js and Supabase. Seeking a backend or full-stack engineering role.

TECHNICAL SKILLS

Languages	Ruby, JavaScript, TypeScript, SQL, Java, C
Backend	Ruby on Rails, Node.js, Express.js, REST API design, JWT auth, Swagger / OpenAPI, Supabase Edge Functions (Deno)
Databases	PostgreSQL, MongoDB, Redis, Supabase (Realtime + Row Level Security)
Testing	RSpec (request & controller specs), Postman
Frontend	React.js, Tailwind CSS, Radix UI / shadcn, HTML5, CSS3
Tools	Git, Bitbucket, GitHub, Sidekiq, WebRTC, Vercel, AI-assisted development

EXPERIENCE

Nearz — Backend Developer Intern — June 2026 – Present

B2B salon analytics & booking platform · Ruby on Rails · PostgreSQL · RSpec · Bitbucket

- Shipped **10 merged pull requests** to the production `api-service` Rails codebase, spanning feature modules, schema migrations, request specs and production bug fixes — each iterated through senior code review.
- Built the **Reschedule Booking API** (`PUT /appointments/:id/reschedule`) as a dedicated endpoint to avoid regressions in the existing booking flow — encoding status-transition rules (customer reschedule reverts to *Pending* for owner re-approval; owner reschedule stays *Confirmed*) and 422 validation that blocks completed or cancelled appointments.
- Delivered the **Billing module** and the product catalogue APIs (index and lookup endpoints), plus update and destroy actions for salon customer profiles.
- Implemented the database schemas behind the Salon Setup and Customer CRM modules — salon settings, staff, products and customer family relationships.
- Fixed production defects across the booking path: promo-code expiry validation, past-dated time-slot booking, and appointment update parameters for guest details — plus staff details and category name in the appointment service serializer.
- Authored RSpec request specs covering the appointment booking flow and `AppointmentsController`; diagnosed a failing delegated-bookings spec caused by RSpec lazy evaluation, tracing it to `let` vs `let!` so records were created before assertions ran.
- Documented endpoint schemas and error responses in the team's Swagger/OpenAPI spec so frontend could integrate without back-and-forth.
- Ran QA for a B2B release — defined the bug-tracking standard and assigned isolated test salons across six testers to prevent data collisions — and mentored an incoming developer through the team's Ruby and Rails roadmap.

Bluestock Fintech — Software Developer Intern — July 2025 – September 2025

- Built a web-based IPO listing platform using React and Express with modular UI and REST APIs.
- Integrated the frontend with backend APIs and optimized database queries, reducing API response time by ~30%.
- Implemented reusable UI components and structured backend routing for scalability, and improved input validation and error handling across the application.

PROJECTS

MockMate — Peer Interview Practice Platform

GitHub · Live

- Built a real-time peer-to-peer mock interview platform with smart matchmaking, WebRTC video calling and session management.
- Implemented a queue-based matchmaking Edge Function (Deno/TypeScript) with FIFO ordering, experience-level compatibility filtering (beginner ↔ intermediate ↔ advanced) and a 10-minute TTL.
- Built WebRTC video calling on browser-native `RTCPeerConnection`, using Supabase Realtime as the signaling channel with SDP offer/answer and ICE candidates persisted in PostgreSQL — no third-party video SDK.
- Designed a normalized PostgreSQL schema across 6 tables with Row Level Security and Realtime replication enabled for live signaling.
- Integrated an Elo rating system (base 1200) for post-session skill tracking across 12+ technical domains.

Tech: *React 18 · TypeScript · Vite · Tailwind CSS · shadcn/ui · Supabase (Auth, Postgres, Realtime, Edge Functions) · WebRTC · TanStack Query · Vercel*

SmartServe — Local Service Marketplace

GitHub · Live

- Built a full-stack service marketplace connecting users with nearby verified providers, with role-based dashboards for customers and service providers.
- Implemented booking workflows, service management and review systems backed by REST APIs with JWT authentication.
- Added search, filtering and location-based provider discovery; deployed to a live production environment.

Tech: *React · TypeScript · Node.js · Express · PostgreSQL · JWT · Tailwind CSS · Vercel*

MERN Authentication System

GitHub · Live

- Developed a secure authentication system using MongoDB, Express and Node.js with user registration and login.
- Implemented Bcrypt password hashing and JWT session management with protected middleware routes, plus error handling and input validation for secure API communication.

Tech: *Node.js · Express · MongoDB · Bcrypt · JWT · REST APIs*

URL Shortener

GitHub · Live

- Built a URL shortening service with custom alias support, click tracking and redirect management.
- Implemented RESTful endpoints for link creation, retrieval and analytics with MongoDB as the data store, behind a clean frontend for generating and managing short links.

Tech: *Node.js · Express · MongoDB · React · REST APIs*
